

HOT NEW PRODUCTS

FROM TRIBUTARIES

Tributaries proudly announces three new HDMI Electronic Products

HX410 HDMI Switcher 4-in to 1-out

Designed to provide a method of accommodating multiple HDMI sources for display on one screen, the HX410 makes it as easy as 1-2-3 via front-panel push button, IR, or RS232. To enhance the performance of cable lengths over 6m, the HX410 features a "Signal Enhance" circuit controlled by a front-panel push button. Depending on the quality and gauge of the HDMI cable used, it is possible to run lengths up to 30 meters without signal degradation.

HX410A HDMI Switcher 4-in to 1-out w/ Digital Audio

The Tributaries® HX410A goes even further: Though identical to the HX410 in every other regard, it also includes both optical and coaxial S/PDIF digital-audio ports for each input and at its single output, allowing the audio and video signals to be routed independently. This makes it a unique problem-solver for the many consumers who are using their new display devices with HDMI and older audio systems without HDMI. The 410A serves as the "missing link" that enables all of these components to work flawlessly together, at a similar price to products that lack this important capability.

The HX410 and HX 410A are HDMI 1.3 and HDCP compliant. Both units are packaged in an attractive display carton and include a 120/240V AC power supply.

HC100 HDMI Format Converter

When the need to convert component video and digital optical audio occurs, the HC100 is the answer. Simply connect the YCbCr/YpPr output and digital optical output from your DVD or Set-Top-Box to the corresponding inputs of the HC100. Then, connect the HDMI output of the HC100 to the HDMI input of your HD ready plasma, LCD or DLP TV. No set-up screens or adjustments to worry about. True Plug-and-Play not Plug-and-Pray! The HC100 is HDMI 1.2 and HDCP compliant, supports up to 1080p/60Hz and comes packaged in an attractive display carton and include a 120/240V AC power supply.
