LP CONVERSION INSTRUCTIONS

WARNING
This conversion must be performed by a qualified installer or gas supplier in accordance with the manufacturer’s instructions and all codes and requirements of the authority having jurisdiction. Failure to follow ALL instructions could result in serious injury or property damage. The qualified agency performing this work assumes responsibility for the conversion.

The pressure regulator and the burner orifices are set for natural gas. To use LP gas, the regulator and burner orifices must be converted.

WARNING
Do not operate the cooktop or oven burners of this range when using LP (bottled) gas before converting the pressure regulator and burner orifices for LP gas use. Failure to do so could cause high flames and toxic fumes which can result in serious injury.

The LP orifices for the cooktop burners are shipped on the back of the range in a small box.

LP Conversion Kit

TOOLS REQUIRED:
• Adjustable wrench
• 1/2” Open-end wrench
• Phillips head screwdriver
• Nut drivers: 1/4”, 9/32” or 7mm
• Flat bladed screwdriver
• Adjustable wrench

To adjust your range for use with LP gas, follow these instructions:
1. Disconnect all electrical power, at the main circuit breaker or fuse box.
2. Turn the manual shut-off valve.

CONVERTING THE PRESSURE REGULATOR

The pressure regulator is located on the rear of the range. (Some models will have a metal shield protecting the regulator that must be removed for conversion and reinstalled when conversion is complete.) The pressure regulator is located in the lower, left hand side of the range as viewed from the front left.

The pressure regulator is located on the rear of the range. (Some models will have a metal shield protecting the regulator that must be removed for conversion and reinstalled when conversion is complete.) The pressure regulator is located in the lower, left hand side of the range as viewed from the front left.

A. If this is your regulator:
   1. Use an adjustable wrench to unscrew the hex-nut cap from the pressure regulator.
   2. Completely remove the protective plastic cap off the threaded metal cap.
   3. Turn the metal cap so the type of gas being converted to is displayed and replace the protective plastic cover.
   4. Screw the hex-nut cap back into the regulator. (Do not over tighten)

B. If this is your regulator:
   1. Use an adjustable wrench to unscrew the hex-nut cap from the pressure regulator.
   2. Turn the plastic cap 1/4 turn to disassemble.
   3. Turn the metal cap 1/4 turn to reassemble. The type of gas to be used is displayed and replace the protective plastic cover.
   4. Screw the hex-nut cap back onto the pressure regulator.

CONVERTING THE COOKTOP BURNERS

The following adjustments must be made before turning on the gas to the oven burner. Failure to do so could result in serious injury due to high flames and toxic fumes.

CONVERTING THE OVEN BURNER

1. Remove oven door, broil drawer, oven bottom, and burner. The oven burner orifice is located behind the drawer. On some models a metal shield must be removed.
2. To convert to LP, replace oven orifice with the one supplied in kit with range.

NOTICE:
Save these orifices for future conversion back to natural gas.

NOTICE:
This product cannot be converted to LP by adjusting the oven orifice. The orifice must be replaced for LP.

To prevent leakage, make sure the orifices are securely screwed into the gas supply tubes.

CONVERTING THE OVEN BURNER ORIFICE

A. Remove the top grates, burner caps and burner heads.
B. Using a 7 mm or 9/32” nut driver, remove the top burner orifices. These may be accessed through the burner opening in the base.

NOTICE:
Save these orifices for future conversion back to natural gas.

E. Place the old orifices into the metal box along with these instructions and replace onto the back of the range for possible future conversion back to natural gas.

NOTICE:
If you are using LP (bottled) gas, all adjustments described in the following steps must be made before you make any burner adjustments.

AIR SHUTTER SETTING FOR OVEN BURNER

1. Turn on the gas.
2. Turn on the electricity.
3. Replace the oven bottom and reinstall the oven door.
4. Turn on the oven burner.
5. As you watch the flame with the oven door closed, check the following through the broil drawer opening.
   a. If the flames are yellow, open the air shutter more. Use a screwdriver to loosen the air shutter screw.
   b. If the flames continue to blow away or flutter from the burner after two minutes of operation, close the air shutter slightly, but not by more than 1/8”.
6. Retighten the air shutter screw.

WARNING
If you attempt to measure the inner cone of the flame, please use caution: burns could result.

Oven burner flame must be observed with the door closed to properly check flame characteristics.

7. Checking the flame size:
   a. It should be approximately 1/2” to 3/4” long for the bake and broil burners.
   b. The combustion quality of the burner flames needs to be determined visually.

   NOTE: If burner flames look like (A), further air shutter adjustment is required. Normal burner flames should look like (B) or (C), depending on the type of gas you use. With LP gas, some yellow tipping on the outer cones is normal.

   - (A) Yellow flames: Further Adjustment Required
   - (B) Blue flame: Normal for LP Gas
   - (C) Soft blue flame: Normal for Natural Gas

Foreign particles in the gas line may cause an orange flame at first, but this will soon disappear.

ADJUSTING LOW FLAME SETTING ON COOKTOP BURNERS

Low setting adjustments must be made with other burners in operation on a medium setting. This procedure prevents the flames from being set too low, resulting in the flame being extinguished when other burners are turned on.

A. Turn on all surface burners.
B. Turn the knob on the burner being adjusted to “LO”.
C. Remove the knob and insert a small, flat blade screwdriver into the valve shaft as shown and turn clockwise to fully tighten down the bypass screw. Repeat for all valves.
D. If flame appears too low or unstable, slowly turn bypass screw counterclockwise until a stable flame exists for each burner.
E. Remember, other burners must be turned on to medium.
F. Replace the knob.

SPECIAL NOTE:
To convert the oven back to natural gas, reverse the instructions given in making LP adjustments.

NOTICE:
Once the conversion is complete and confirmed, fill out the LP sticker and include your name, organization and date conversion was made. Apply the sticker to the range near the regulator to alert others in the future that this appliance has been converted to LP. If converting back to natural gas from LP, please remove the sticker so others know the appliance is set to use natural gas.
